

# Comprehensive Security Solutions

Get access to services provided by At-Bay and its technology partners

Every At-Bay customer receives access to a wide range of protective services that can help prevent cyber attacks before they happen. Learn more about our proprietary Active Risk Monitoring service, as well as our partnerships with leaders in cyber security and technology.

## Active Risk Monitoring

Active Risk Monitoring (ARM) is our solution to the dynamic nature of cyber risk: a combination of frequent scans to detect vulnerabilities and an in-house security team to help resolve issues before they are exploited.

We scan the digital assets of our customers to look for vulnerabilities at the time of quoting and throughout the policy year. If an issue is detected, our security team immediately issues an alert to the customer and provides recommendations on how to quickly resolve the issue.

Through ARM, At-Bay's ransomware claims frequency is 5x lower than the industry average.

**What you get:** ARM is automatically included with every Cyber and Tech E&O policy.

At-Bay partners with Microsoft to strengthen the cyber security posture of our customers. Businesses that use Microsoft 365 can save up to 15% on their policy premium by implementing two security controls:

Multi-factor authentication for all network and email access.

Microsoft Defender for Office 365 or another secure email gateway.

You must complete an application and confirm the required security controls are in place to qualify.

**What you get:** Up to 15% off your At-Bay policy premium for implementing high-priority security controls.
